The **Progetto P.A.T.** (Provincia Autonoma di Trento_Independent Province of Trento) highlights the first intervention just few weeks after the quake of April 6th. Financed by P.A.T. ILLE has built 70 houses in the villages of Onna and Coppito. Especially Onna represents the most damaged place of the quake, where almost all houses of this small village have collapsed with over 30 casualties. The quality and finishing items in both locations are very remarkable and have been take as guide lines by several other companies. In the houses of Coppito village, ILLE adopts the innovative X-LAM (Cross-LAM) construction method with intersected wooden panels which offer a high resistance against the quake. With the X-LAM system ILLE has tested a 7 floors wooden house in a Japan laboratory with a simulation of the strong Kobe quake. The test successfully passed. (See details visiting www.sofieveritas.com) Regarding sites phases of Progetto P.A.T. details and photos can be seen visiting the web site www.liveille.com
